

How To Clean Your Water Bath

PLEASE NOTE: The water bath must be cleaned after every use.

1. **Turn off the power:** Switch off the power supply at the wall.
2. **Empty the water tank:** Use the 3 litre jug provided by KGF. Hold it under the safety water tap and release the used water in batches until the tank is completely empty.
3. **Wash the tank:** Refill the tank with hot, soapy water. Use a dishcloth held with metal tongs to thoroughly clean the inside of the tank.
4. **Repeat emptying:** Empty the tank again by following step 2.
5. **Rinse thoroughly:** Refill the tank with clean, warm water and rinse until it is spotlessly clean.
6. **Ready for use:** Your water bath is now clean and ready for its next use.
