

Heating Guidelines

These trays are designed for:

- Oven: Safe for heating up to 190°C.
- Microwave: Use on a high setting.

Single Use & Recycling

- These trays are disposable and for single use only as per KGF's food safety regulations.
- They are 100% recyclable. For details, see our Recycling and Sustainability Policy on our website.

Material Information

- Trays and protective film lids are made from food safe Cpet materials suitable for heating and chilling.
- Materials are BPA free for your safety.

Reheating Options

Please refer to the KGF Daily Ingredients and Reheating Guide for the specific instructions when heating.

Option 1: Leave the protective film in place

1. Do not remove the plastic film.
2. Pierce the film 3–4 times with a fork to allow steam to escape during heating.
3. Heat the tray as directed in the Reheating Guide for that meal.
4. The film can be easily removed when hot.

Option 2: Remove the protective film before heating

1. Remove the film by using a sharp knife to cut around the inside edge of the film before heating.
2. Heat the tray as directed in the Reheating Guide for that meal.
3. Note: The heat sealed film cannot be peeled off when the tray is chilled.
